Protect and defend computer systems and networks from cybersecurity attacks. Characterize privacy, legal and ethical issues of information security. Critical thinking and problem-solving skills to detect current and future attacks on an organization's computer systems and networks. Diagnose and investigate cybersecurity events or crimes related to computer systems and digital evidence. Plan, implement and audit operating systems' security in a networked, multi-platform and cross platform environment. Detect attack methodology and combat hackers from intrusion or other suspicious attempts at connection to gain unauthorized access to a computer and its resources. After the completion of this program, the students and staff will be able to develop basic understanding of security, cryptography, system attacks and defences against them.</p> |
